

Robertson reference verification: 100-fold tolerance tightening

Radau: (rtol, atol) = $(10^{-10}, 10^{-12}) \rightarrow (10^{-12}, 10^{-14})$

A Changes on the common output grid

Output grid: $t = 0$ plus 241 logarithmically spaced times from $1e-8$ to 40.

Exact-zero changes and $t = 0$ are omitted from log axes. Changes are consistency checks, not true-error bounds.

B Endpoint and trajectory checks
